#### **DETAILED ACTION**

#### Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

## Claim Objections

- 2. Claim 14 is objected to because of the following informalities: perhaps the first line could have the word --comprises-- at the end of it? Appropriate correction is required.
- 3. Claim 15 is objected to because of the following informalities: the "transparent host material" finds its antecedent basis in the "host crystal that is transparent" of claim 14. Appropriate correction is required.
- 4. Claim 19 is objected to because of the following informalities: the "host material" finds its antecedent basis in the "host crystal that is transparent" of claim 14. Appropriate correction is required.
- 5. Claim 20 is objected to because of the following informalities: the "host material" finds its antecedent basis in the "host crystal that is transparent" of claim 14. Appropriate correction is required.
- 6. Claim 21 is objected to because of the following informalities: the "host material" finds its antecedent basis in the "host crystal that is transparent" of claim 14. Appropriate correction is required.

# Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 8. Claims 11-13 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Singh *et al.* (US005837054A).

With respect to independent claim 11, Singh et al. discloses an ultraviolet detection system 1 (Fig. 3) comprising an optical system 6 capable of focusing (directing) incident radiation 4 (column 3, lines 33-34), an ultraviolet crystal filter 8 (column 3, line 39) having a pass band in a desired spectral region (Fig. 2, column 3, lines 20-24) and positioned as recited, and a radiation detection system 10 sensitive to radiation in at least the pass band of filter 8 (column 3, lines 41-42) and positioned as recited.

With respect to dependent claim 12, the desired spectral region in the ultraviolet detection system of Singh *et al.* includes radiation having a wavelength in the recited range (Fig. 2).

With respect to dependent claim 13, the optical system 6 in the ultraviolet detection system of Singh *et al.* includes filters (in the plural, column 3, lines 35-37). In view of the desire to detect ultraviolet wavelengths and absorb longer wavelengths as expressed by Singh *et al.* (column 1), it is inherent that the typical filters used in this type of system filter out radiation having wavelengths above those in the desired spectral region.

Art Unit: 2878

## Claim Rejections - 35 USC § 103

- 9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 10. Claims 14 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Singh *et al.* (US005837054A) in view of Guida (US005204773A).

With respect to dependent claim 14, the ultraviolet crystal filter 8 in the ultraviolet detection system of Singh et al. includes a crystal (column 1, line 63) that is transparent within at least the desired spectral region (Fig. 2) but the crystal does not include a dopant. Guida shows that an ultraviolet crystal filter 10 (Fig. 3) having a pass band in a desired spectral region (Fig. 1, the same desired spectral region that Singh et al. is interested in) may comprise a host crystal that is transparent within at least the desired spectral region (column 2, lines 64-68) and at least one dopant (column 2, lines 63-64 and column 3, line 30) incorporated with the host crystal. Furthermore, the dopant in the ultraviolet crystal filter of Guida provides optical absorption bands such that the crystalline (crystal as recited in claim 11) filter has the pass band within the desired optical region (column 3, line 67 to column 4, line 22). In view of the flexibility described by Guida in adjusting the particular transmittance by choice of dopant and choice of dosage, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the ultraviolet detection system 1 of Singh et al. to comprise an ultraviolet crystal filter in the form of a host crystal and dopant as suggested by Guida.

Art Unit: 2878

With respect to dependent claim 15, the transparent host material (crystal as recited in claim 14) suggested by Guida is one or more of the members in the recited group (column 2, lines 67-68).

# Response to Submission(s)

11. The amendment filed November 10, 2003 has been entered.

#### **Allowable Subject Matter**

- 12. Claims 16-21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 13. The following is a statement of reasons for the indication of allowable subject matter: in an ultraviolet detection system of the type recited, in view of the disclosure of Guida of calcium fluoride as a host crystal, the particular dopants are not suggested.

#### Conclusion

- 14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ciammaichella *et al.* (US004578583A) shows that the sequence, in an ultraviolet detection system 10 (Fig. 1), of an optical system 16, an ultraviolet filter 20, and a radiation detection system 22 has long been known.
- 15. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Constantine Hannaher whose telephone number is (571) 272-2437. The examiner can normally be reached on Monday-Friday with flexible hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David P. Porta can be reached on (571) 272-2444. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
